1. **Identify the subject and the main idea of the text.**  
 The subject is the impact of climate change on the environment. The main idea is that climate change is causing significant environmental damage, including rising sea levels, extreme weather, and loss of biodiversity.

2. **Summarize the key points of the text.**  
 The text discusses the following key points:  
 - Rising sea levels due to melting ice sheets and glaciers.  
 - Increased frequency and intensity of extreme weather events like hurricanes and droughts.  
 - Loss of biodiversity as habitats are destroyed or altered.  
 - The urgent need for global action to reduce greenhouse gas emissions.

3. **Explain the author's perspective on the issue.**  
 The author's perspective is that climate change is a serious and immediate threat to the planet. They argue that human activities, particularly the burning of fossil fuels, are the primary cause of the problem. The author calls for a collective effort from governments, businesses, and individuals to address the issue before it's too late.

4. **Identify any evidence or data presented in the text.**  
 The text mentions several pieces of evidence and data:  
 - Scientific consensus that the Earth is warming.  
 - Reports from the Intergovernmental Panel on Climate Change (IPCC).  
 - Observations of melting ice sheets and glaciers.  
 - Statistics showing the increase in extreme weather events over the past few decades.

5. **Discuss the implications of the text for the future.**  
 The implications of the text are significant. If climate change continues unchecked, it could lead to catastrophic environmental consequences, including the collapse of ecosystems, the displacement of millions of people due to rising sea levels, and the loss of many species. The text emphasizes that the future of the planet depends on the actions taken in the present.
